

SCRUBAIRE

Following requests from several of our customers, we have designed a range of air filtration equipment for use within different environments. Whereas our air movers are principally used within the asbestos removal industry to create negative pressure work enclosures, our air filtration products are used to 'scrub' the air of dust, pollen, mould, bacteria and fumes by the use of various types of filter media.

The purpose of the Scrubaire is to draw in contaminated or polluted air through a series of filters, located on each surface of the machine, returning clean air at low level back to the environment.

Constructed from 5mm ABS thermoplastic sheet bonded to form triple welds the Scrubaire 2000 has been designed to be easy to use and easy to clean. It is well placed to be used in office environments, hospitals and computer rooms or any other space where air filtration is needed.

The standard filtration setup will separate out more than 99.995% of particulates down to 0.3 micron size before discharging the cleaned air. Where the problem is "odour" a supplementary carbon filter can be fitted (available on request).

Scrubaire Mini

The Scrubaire Mini has been developed to fit in the most smallest of places whilst still offering the same air filtration facilities as the Scrubaire 2000.

Technical Specifications

Specifications	SA2000	Mini
Volume m ³ /hr	2000	500
Power Supply	230v	230v
Motor Power KW	0.41	0.46
Fuse	2 amps	2 amps
dB	63.9	64.6
Weight	61kg	20kg
Manometer	0-1250pa	0-1250pa
Dimensions	Height	1265mm
	Width	585mm
	Length	585mm
Castor Swivel Braked	100mm	100mm
Castor Swivel	100mm	100mm
Ground Clearance	135mm	135mm
