

# AQUARIUS Portable Hot Water System

The Aquarius Portable Hot Water System has been designed to provide hot and cold running water to your hand basins and showers. Working like the hot water in your home, simply connect to mains cold water via a ¾" BSP hose connector, plug into a suitable 230v 13 amp mains electricity supply and the Aquarius Portable Hot Water System will do the rest.

The internal 200 litre tank will automatically fill and heat to 60°C. As you use the hot water the tank will refill and re-heat. The unique filling arrangement will ensure that cold water is introduced at the bottom of the hot water tank, ensuring that the maximum amount of hot water is available. There are no pressurised tanks within the unit, the hot water is distributed by an internal pump to the taps and showers as required. An internal Pressure Reducing Valve ensures that the cold water is matched to the pressure of the hot water.

The Aquarius Portable Hot Water System allows you to put your washing facilities where you need them, with ease, speed and convenience.

## Benefits of the Aquarius Portable Hot Water System

- ★ EASY TO USE
- ★ PORTABLE
- ★ ROBUST
- ★ LOW MAINTENANCE

## Aquarius Portable Hot Water System Technical Specifications

Specifications		
Capacity		200 litres
Power supply		110 or 230 volts 16 amps or 32 amps
Dimensions		1125(h) x 580(w) x 685(d)mm
Weight		56.4 kg
Heater Element		1 x 1650 watt or 1 x 3000 watt
Heater Control		thermostat and contactors
Heater Element Protection		Float switch and safety cut out thermostat
Protection for Pumps		Inline quad filter of 20µ 2 amp fuse
Pumps Shower	17 litres/min	Quad diaphragm 230v or 110v
Operation		Open the tap to activate pump.
